Complex Numbers

Exercise B

$$\begin{aligned} 9(i) \quad (z-\alpha)(z-\beta) &= z^2 - \alpha z - \beta z + \alpha\beta \\ &= z^2 - (\alpha+\beta)z + \alpha\beta \end{aligned}$$

The quadratic equation with roots α and β can be written as $(z-\alpha)(z-\beta) = 0$

$$\Rightarrow z^2 - (\alpha+\beta)z + \alpha\beta = 0$$

$$\begin{aligned} (ii) \quad (a) \quad \text{Sum of roots} &= 7+4j + 7-4j = 14 \\ \text{Product of roots} &= (7+4j)(7-4j) = 49+16 = 65 \\ \text{Equation is} \quad z^2 - 14z + 65 &= 0 \end{aligned}$$

$$\begin{aligned} (b) \quad \text{Sum of roots} &= \frac{5j}{3} - \frac{5j}{3} = 0 \\ \text{Product of roots} &= \frac{5j}{3} \times -\frac{5j}{3} = \frac{25}{9} \\ \text{Equation is} \quad z^2 + 0z + \frac{25}{9} &= 0 \\ \text{i.e.} \quad 9z^2 + 25 &= 0 \end{aligned}$$

$$\begin{aligned} (c) \quad \text{Sum of roots} &= -2 + \sqrt{8}j - 2 - \sqrt{8}j = -4 \\ \text{Product of roots} &= (-2 + \sqrt{8}j)(-2 - \sqrt{8}j) = 4 + 8 = 12 \\ \text{Equation is} \quad z^2 + 4z + 12 &= 0 \end{aligned}$$

$$\begin{aligned} (d) \quad \text{Sum of roots} &= 2+j + 3+2j = 5+3j \\ \text{Product of roots} &= (2+j)(3+2j) \\ &= 6 + 4j + 3j - 2 = 4+7j \\ \text{Equation is} \quad z^2 - (5+3j)z + 4+7j &= 0 \end{aligned}$$
